

Bait Breakdown Checklist

- ☐ Feature name is listed as Bait Breakdown.
- ☐ Feature purpose explains that Bait Breakdown expands the Sonar Analysis Log with user friendly warning explanations.
- ☐ User problem explains that users may not understand technical scan warnings or risk scores.
 - Related phishing indicators are listed, including missing HTTPS, URL shorteners, long URLs, suspicious redirects, phishing keywords, impersonation, and requests for sensitive information.
- ☐ Research support connects the feature to CISA, FTC, NIST, OWASP, and Cloudflare.
- ☐ User explanation describes what was detected, why it may be risky, and what the user should do next.
- ☐ Recommended action tells users to avoid suspicious links, verify the sender or destination, and avoid entering sensitive information.
- ☐ Connection to risk score explains that detected warnings help justify the final risk level.
- ☐ Prototype status identifies Bait Breakdown as a planned improvement to the current Sonar Analysis Log.
- ☐ Related user story is included: As a user, I want to understand why a URL was flagged as suspicious so that I can make a safer decision before opening it.
- ☐ Acceptance criteria include warning title, simple explanation, reason for risk, recommended action, clear language, and connection to the scan result.
- ☐ Team review notes ask whether explanations should appear directly in the Sonar Analysis Log or as expandable sections.
